

Case study:

computer-individuell

computer
Andreas G. Ulbricht **individuell**[®]

Company focus:	IT services
Location:	Germany
Licenses in use:	50
Preferred features:	Calendar, Contacts, PGP
Why eM Client:	→ CalDAV and CardDAV connection w/ no detours → easy-to-use PGP encryption → not forcing social networks
Use-case:	→ advanced email communication → time & contact management

computer-individuell came across the application in 2014 while looking for a stable email management solution that would provide them with flexible configuration and a replacement for Outlook.

The primary reason to choose eM Client for Andreas and his clients was its unique feature of direct CalDAV and CardDAV connection without detours.

Andreas G. Ulbricht **individuell**[®]

“The CalDAV and CardDAV connection in eM Client is an excellent way to synchronize calendars and contacts via a private cloud on NAS systems and it allows me to use the calendar and contact features to the max.

I also need to emphasize the PGP encryption in the simplicity of its existing implementation.

As connection to social networks featured in other email clients is completely unappealing to my target audience and me, I appreciate eM Client’s lightness in this sense.”

“I can see the further development of eM Client and I’m looking forward to the new version. I’m curious if version 8 contains something new, which I can look forward to. I would appreciate a more flexible licensing, but overall I am very satisfied with the product and I am actively recommending it to my circles.”

“I have known eM Client for years and have many licenses in use. Sometimes, when I organize professional events, I occasionally give away lifetime licenses of eM Client that I had acquired to my audience - I can replenish my pool and it is great to inspire other IT companies.”, says **Andreas Ulbricht**.
